

SKIDABRADER
PAVEMENT TEXTURING TECHNOLOGY

OPERATING ROOM

SHOT RECYCLER

DUST COLLECTOR

SHOTBLASTING APPARATUS

WORKING PRINCIPAL

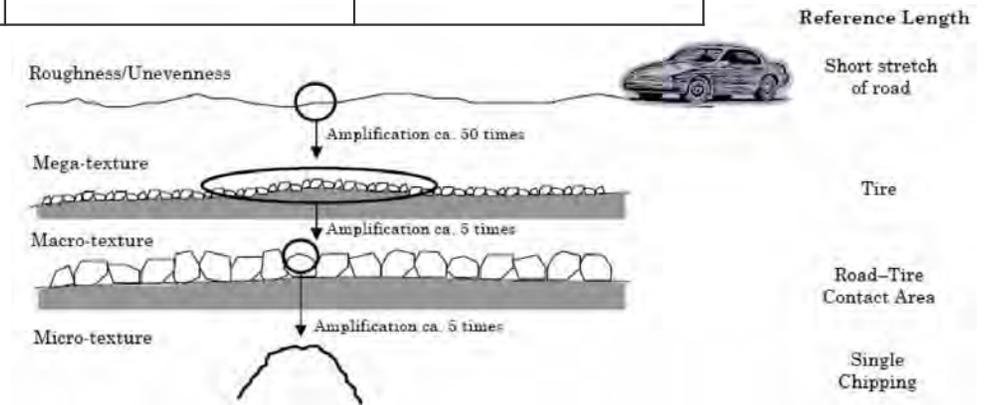

High Velocity Pavement Texturing incorporates the use of high-speed bi-directional blast wheels to propel steel shot in a controlled pattern towards a substrate. The high-speed impact of the steel shot abrades and removes contaminants while texturing the surface. The steel shot rebounds into an air wash separator, where it is cleaned and returned to the blast wheel for reuse. The contaminants are collected within a containment system for later disposal.

Factors Influencing Pavement Surface Friction

Pavement Surface Characteristics	Vehicle Operating Parameters	Tire Properties	Environment
<ul style="list-style-type: none"> • Micro-Texture • Macro-Texture • Mega-Texture • Roughness/Unevenness • Material Properties • Temperature 	<ul style="list-style-type: none"> • Slip Speed <ul style="list-style-type: none"> ➢ Vehicle Speed ➢ Braking Action • Driving Maneuver <ul style="list-style-type: none"> ➢ Turning ➢ Overtaking 	<ul style="list-style-type: none"> • Foot Print • Tread Design • Tread Condition • Rubber Composition and Hardness • Inflation Pressure • Load • Temperature 	<ul style="list-style-type: none"> • Climate <ul style="list-style-type: none"> ➢ Wind ➢ Temperature ➢ Water (Rainfall, Condensation) ➢ Snow and Ice • Contaminants <ul style="list-style-type: none"> ➢ Anti-Skid Material ➢ Dirt, Mud, Debris
